PROFESSIONAL SUMMARY

Senior Java Backend Engineer with 3.7+ years of experience building enterprise-scale backend platforms, distributed microservices, and cloud-native infrastructure for global banking systems. Experienced in designing production-grade Spring Boot services, event-driven architectures with Kafka, Infrastructure as Code using Terraform, Kubernetes orchestration, and Google Cloud Platform. Proven track record of modernizing legacy systems, automating cloud infrastructure, accelerating software delivery through CI/CD, and improving platform reliability. Passionate about platform engineering, distributed systems, AI-assisted software development, and building scalable backend architectures.

KEY ACHIEVEMENTS

- Delivered enterprise cloud migration platform supporting modernization from OpenShift to Google Cloud.
- Reduced manual reporting effort by over 70% through backend automation.
- Delivered production-ready cloud-native dashboard within one week using AI-assisted development.
- Built distributed Kafka-based backend services enabling reliable event-driven communication.
- Standardized infrastructure provisioning through reusable Terraform modules.
- Automated CI/CD pipelines improving deployment consistency and engineering productivity.

SKILLS

Backend: Java 17, Spring Boot, Spring Security, Spring Data JPA, Spring Cloud, Spring AI, Hibernate
Architecture: Microservices, Distributed Systems, REST APIs, Event-driven Architecture, SOLID, Design Patterns, Concurrency, Multithreading
Cloud: Google Cloud Platform, Cloud Run, GKE, Cloud SQL, BigQuery, IAM, Secret Manager, KMS
DevOps: Terraform, Docker, Kubernetes, OpenShift, GitHub Actions, Jenkins, Helm
Messaging: Kafka
Databases: Oracle, PostgreSQL, MySQL
Testing: JUnit5, Mockito, Playwright, TestNG
Developer Tools: Git, Linux, Maven, GitHub Copilot, Gemini Code Assist

WORK EXPERIENCE

Senior Software Engineer *Jan 2025 – Present*
HCL Technologies Ltd (Pune) | Client: **Deutsche Bank** | Domain: **Banking**

Project: Cloud Migration Platform

Designed and developed cloud-native backend solutions supporting enterprise migration from OpenShift to Google Cloud Platform for large-scale banking applications.

- Designed reusable Terraform modules to provision secure and scalable cloud infrastructure across multiple environments.
- Engineered GitHub Actions pipelines eliminating manual deployments and standardizing release workflows across cloud applications.
- Migrated enterprise repositories from Bitbucket to GitHub while standardizing engineering workflows and repository governance.
- Deployed containerized applications on Google Kubernetes Engine (GKE) using Helm, enabling repeatable and production-ready deployments.
- Integrated Cloud SQL, BigQuery, Secret Manager, IAM and KMS to build secure, scalable cloud-native services.
- Improved platform reliability by implementing standardized infrastructure, secure access policies and deployment automation.
- Collaborated with cross-functional platform, infrastructure and application teams to execute end-to-end cloud migration initiatives.

Tech Stack: Terraform | GCP (GKE, Cloud SQL, BigQuery, Secret Manager, IAM, KMS) | GitHub Actions | Docker | Kubernetes | Helm | GitHub | Bitbucket | Networking | SonarQube

Project: ORR Dashboard

Designed and built a cloud-native analytics platform providing real-time visibility into enterprise migration progress across multiple engineering teams.

- Architected backend services using Spring Boot to automate ingestion and processing of migration data through scheduled pipelines.
- Designed REST APIs powering React-based dashboards that tracked migration status, deployment health and application readiness.
- Designed scalable data ingestion architecture capable of continuously processing enterprise migration metadata into cloud-native analytics services.
- Automated infrastructure provisioning using Terraform and deployment using GitHub Actions and Cloud Run.
- Delivered production-ready cloud dashboard within one week using AI-assisted development, accelerating project delivery.
- Eliminated manual reporting by automating migration tracking workflows, significantly improving engineering visibility and decision-making.

Tech Stack: Java | Spring Boot | React.js | PostgreSQL (Cloud SQL) | GCS | Cloud Run | Terraform | GitHub Actions | Docker | GitHub Copilot | SonarQube | Playwright

Project: Transactions

Designed backend microservices responsible for consolidating trade transactions across distributed enterprise systems.

- Developed scalable Spring Boot microservices processing high-volume transactional workloads.
 - Implemented Merge Skip Null strategy improving data consistency and preventing unintended data overwrites.
 - Applied multithreading and concurrency techniques to optimize transaction processing performance.
 - Improved backend stability through performance tuning, refactoring and resilient service design.
 - Built loosely coupled REST-based microservices following SOLID principles and clean architecture.
- Tech Stack:** Java | Spring Boot | Kafka | Oracle | Docker | Kubernetes

Project: Scheduled Reports

Designed backend scheduling engine for automated generation and delivery of enterprise trade reports.

- Developed configurable scheduling engine supporting daily, weekly, monthly and yearly execution.
- Automated report generation reducing manual reporting effort by over 70%.
- Designed REST APIs enabling configurable scheduling and report management.
- Optimized large-volume report generation through efficient backend processing strategies.

Tech Stack: Java | Spring Boot | REST APIs | Oracle

Project: CI/CD Automation & Deployment (DevOps enablement)

Designed deployment automation improving release consistency across enterprise applications.

- Built Jenkins-based CI/CD pipelines automating build, testing and deployment.
- Containerized applications using Docker and Kubernetes.
- Standardized deployment process across OpenShift environments.
- Improved deployment reliability through automated health checks and release validation.

Tech Stack: Docker | Kubernetes | Jenkins | OpenShift

Software Engineer

HCL Technologies Ltd (Pune) | Client: **Deutsche Bank** | Domain: **Banking**

Jan 2023 – Dec 2024

Project: Transaction Notification

Built event-driven backend services responsible for real-time trade notification processing across distributed banking systems.

- Designed Kafka-based asynchronous messaging architecture enabling reliable event processing.
- Developed Spring Boot microservices exposing REST APIs consumed by downstream banking applications.
- Improved notification delivery reliability through fault-tolerant producer-consumer implementations.
- Optimized backend processing to support high-throughput event handling with reduced latency.
- Collaborated with multiple application teams to integrate notification services into enterprise workflows.

Tech Stack: Java | Spring Boot | Kafka | REST APIs

Project: WFMS Lift Shift

Contributed to modernization initiative migrating monolithic applications to scalable microservices architecture.

- Refactored legacy services into independently deployable Spring Boot microservices.
- Assisted in phased decommissioning of legacy components with zero business disruption.
- Improved maintainability and scalability through modular backend design.

Tech Stack: Java | Spring Boot | Microservices

Intern

Jan 2022 – Dec 2022

HCL Technologies Ltd (Bangalore)

- Contributed to backend development using **Java** and **Spring Boot**

CERTIFICATES

Cloud Digital Leader	May 2023
Oracle Cloud Infrastructure Certified DevOps Professional	Sep 2025
GitHub Copilot	March 2026

EDUCATION

Bachelor of Computer Application - GPA: 8.8917
