PROFESSIONAL SUMMARY

Java Backend Engineer with **3.9+ years of experience** in designing and building **scalable, high-performance microservices-based applications** using **Java, Spring Boot, and distributed systems**. Strong expertise in **event-driven architecture using Kafka, RESTful APIs, and CI/CD pipelines with Docker, Kubernetes, and Jenkins**. Proven track record of improving **system performance, reliability, and automation efficiency in Agile** environments. Skilled in applying design patterns, SOLID principles, and clean architecture for maintainable and extensible systems.

KEY ACHIEVEMENTS

- Reduced manual reporting effort by 70%+ through backend automation and scheduling systems
- Built event-driven microservices architecture enabling high-throughput and fault-tolerant communication
- Improved backend performance and stability through code optimization and refactoring
- Successfully deployed containerized applications using Docker, Kubernetes, and CI/CD pipelines
- Contributed to migration of legacy systems to scalable microservices architecture

SKILLS

Languages: Core Java (Collections, Multithreading, Exception Handling), PL/SQL
Frameworks: Spring Framework (Spring Boot, Spring Security, Spring Data JPA, Spring Cloud), Hibernate
Architecture: Microservices, Distributed Systems, REST APIs, Stateless Services, Design Patterns, SOLID Principles
Databases: Oracle, MySQL
CI/CD & Tools: Jenkins, Maven, Git, GitHub, BitBucket, JFrog
Containers & Orchestration: Docker, Kubernetes, OpenShift
Messaging: Kafka (Event-driven Architecture)
Testing: JUnit5, Mockito, TestNG, Cucumber
Process: SDLC, Agile (Scrum, Sprint Planning), Code Reviews
Others: IntelliJ, Eclipse, Linux/Unix

WORK EXPERIENCE

Senior Software Engineer Jan 2025 – Present
HCL Technologies Ltd (Pune) | Client: **Deutsche Bank** | Domain: **Banking**

Project: Transactions

Consolidating trade transactions flowing downstream to ensure data consistency and reliability across systems.

- Designed and developed **scalable Spring Boot microservices** to process high-volume trade transactions across distributed systems
- Improved **data consistency and reliability**, ensuring accurate transaction processing across services
- Implemented **Merge Skip Null Strategy** to prevent data overwrites and enhance data integrity
- Applied **multithreading and concurrency techniques** to optimize processing performance
- Reduced system failures and improved stability through **performance tuning and code refactoring**
- Designed loosely coupled services using **REST and event-driven architecture principles**
- Ensured maintainability using **SOLID principles and design patterns**
- Collaborated with cross-functional teams for **end-to-end feature delivery in Agile environment**

Tech Stack: Java | Spring Boot | Kafka | Oracle | Docker | Kubernetes

Project: Scheduled Reports

Automated generation and delivery of scheduled trade transaction reports to users based on configured frequency.

- Designed and implemented backend services to automate report generation, reducing manual effort by 70%+
- Developed **RESTful APIs** supporting configurable scheduling (daily, weekly, monthly, yearly)
- Ensured **secure, reliable, and scalable delivery** of reports across distributed systems
- Implemented scheduling logic to handle large-scale data processing efficiently

Tech Stack: Java | Spring Boot | REST APIs | Oracle

Project: CI/CD Automation & Deployment (DevOps enablement)

Automating Continuous Integration and Delivery of applications.

- Containerized applications using **Docker** and deployed workloads on **Kubernetes/OpenShift clusters**
- Contributed to **Jenkins CI/CD pipelines** enabling automated build and deployment processes
- Implemented **health checks, monitoring, and logging** to improve system reliability
- Enabled continuous delivery by integrating deployments with version control workflows

Tech Stack: Docker | Kubernetes | Jenkins | OpenShift

Software Engineer

HCL Technologies Ltd (Pune) | Client: Deutsche Bank | Domain: Banking

Project: Transaction Notification

Implemented automated transaction notification service to alert users on trade events via email, improving transparency and real-time communication.

- Developed **Kafka-based event-driven microservices** for real-time transaction notifications
- Enabled **asynchronous, high-throughput communication** between distributed services
- Designed and consumed **REST APIs** for seamless service integration
- Improved notification delivery speed and reliability across systems
- Implemented fault-tolerant messaging using **producer-consumer** patterns

Tech Stack: Java | Spring Boot | Kafka | REST APIs

Jan 2023 – Dec 2024

Project: WFMS Lift Shift

Decommissioned legacy application modules as part of the modernization initiative by migrating functionality to newer technology platforms.

- Participated in migration of legacy applications to **modern microservices architecture**
- Assisted in **safe decommissioning of legacy modules** without impacting business workflows
- Improved system maintainability, scalability, and long-term reliability
- Supported backend enhancements during transition to new platforms

Tech Stack: Java | Spring Boot | Microservices

Intern

HCL Technologies Ltd (Bangalore)

- Contributed to backend development using **Java** and **Spring Boot**

Jan 2022 – Dec 2022

EDUCATION

Bachelor of Computer Application

- GPA: **8.8917**, Relevant Courses: Data Structures, Web Dev, Databases, Software Engineering

CERTIFICATES

Cloud Digital Leader

Oracle Cloud Infrastructure Certified DevOps Professional

GitHub Copilot

May 2023

Sep 2025

March 2026
