PROFESSIONAL SUMMARY

Java Backend Engineer with 3.9 years of experience in Core Java, Spring Framework, and Microservices architecture, building scalable and high-performance backend systems. Strong expertise in REST APIs, distributed systems, Kafka-based event-driven architecture, and CI/CD using Docker, Kubernetes, and Jenkins. Experienced in Agile SDLC with a focus on clean code, design patterns, and system reliability.

SKILLS

Languages: Core Java (Collections, Multithreading, Exception Handling), PL/SQL

Frameworks: Spring Framework (Spring Boot, Spring Security, Spring Data JPA, Spring Cloud), Hibernate

Architecture: Microservices, Distributed Systems, REST APIs, Stateless Services, Design Patterns, SOLID Principles

Databases: Oracle, MySQL

CI/CD & Tools: Jenkins, Maven, Git, GitHub, BitBucket, JFrog

Containers & Orchestration: Docker, Kubernetes, OpenShift

Messaging: Kafka (Event-driven Architecture)

Testing: JUnit5, Mockito, TestNG, Cucumber

Process: SDLC, Agile (Scrum, Sprint Planning), Code Reviews

Others: IntelliJ, Eclipse, Linux/Unix

WORK EXPERIENCE

Senior Software Engineer

Jan 2025 – Present

HCL Technologies Ltd (Pune) | Client: **Deutsche Bank** | Domain: **Banking**

Project: Transactions

Consolidating trade transactions flowing downstream to ensure data consistency and reliability across systems.

- Developed **scalable Spring Boot microservices** to process high-volume trade transactions, improving **backend performance, reliability, and data consistency**.
- Implemented **Merge Skip Null Strategy** to intelligently merge transaction data without overwriting valid values.
- Built **scalable, modular backend services** aligned to microservices architecture.
- Applied **Core Java concepts** including collections, multithreading, and concurrency to build efficient and scalable backend services.
- Implemented **design patterns** and followed **SOLID principles** to ensure maintainable and extensible code.
- Contributed to designing **microservices-based architecture** ensuring scalability, fault tolerance, and high availability.
- Optimized backend services through **performance tuning, code refactoring, and defect resolution**, improving **system stability and production reliability**.
- Worked in **CI/CD environment** deploying services after every PR merge to enable **continuous delivery**.

Project: Scheduled Reports

Automated generation and delivery of scheduled trade transaction reports to users based on configured frequency.

- Developed **backend scheduling services** to automate **email-based transaction reports**.
- Developed RESTful APIs following clean architecture and design best practices.
- Enabled **configurable scheduling frequencies** (daily / weekly / monthly / yearly).
- Ensured **accuracy, reliability, and secure** delivery of reports.
- Reduced manual effort through **backend automation**.
- Followed **Agile methodology** and participated in full **Software Development Life Cycle** (SDLC).

Project: Automated Application Build and Deployment

Automating Continuous Integration and Delivery of applications.

- Built and **containerized backend services** using **Docker**.
- Deployed** workloads on **Kubernetes** and **OpenShift**.
- Supported in implementation of **Jenkins CI/CD pipelines** enabling **automated builds**.
- Implemented reliability features including **health checks** and **monitoring**.

Project: Transaction Notification

Implemented automated transaction notification service to alert users on trade events via email, improving transparency and real-time communication.

- Implemented transaction **notification microservices** to send **real-time email alerts** on trade events.
- Developed and consumed **REST APIs** for event communication.
- Implemented **Kafka-based asynchronous messaging** to enable **high-throughput, fault-tolerant event-driven communication** between microservices.
- Ensured timely and reliable notification delivery improving transparency.
- Integrated notification services with downstream business systems.

Project: WFMS Lift Shift

Decommissioned legacy application modules as part of the modernization initiative by migrating functionality to newer technology platforms.

- Participated in **Lift & Shift migration** to move critical workflows from legacy systems to modern platforms.
- Helped **identify, analyze, and decommission** legacy modules safely without impacting business flow.
- Supported **backend modifications** and ensured **smooth functional transition**.
- Contributed to improving **maintainability, performance**, and long-term platform stability.

Intern

Jan 2022 – Dec 2022

HCL Technologies Ltd (Bangalore)

- Assisted in backend development and automation testing using **Java** and **Spring Boot**.

EDUCATION

Bachelor of Computer Application

- GPA: **8.8917**, Relevant Courses: Data Structures, Web Dev, Databases, Software Engineering

CERTIFICATES

Cloud Digital Leader	May 2023
Oracle Cloud Infrastructure Certified DevOps Professional	Sep 2025
GitHub Copilot	March 2026
